

INDIRA SRIBHASHYAM

Full Stack Engineer | Generative AI Developer | **SIH National Finalist 2024 & 2025**

sbindira15@gmail.com | +91 93474 50071 | Eluru, India (Open to Relocation) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Final-year B.Tech (CSE-IoT) student with hands-on experience in full-stack web development, Generative AI, and RAG pipeline engineering. Built and deployed **SankalpAI** — a production-grade cybersecurity AI assistant served via FastAPI and containerised with Docker and **FinDash**, a live AI-enhanced financial dashboard with real-time analytics. Two-time **Smart India Hackathon National Finalist (2024 & 2025)**. Seeking Software Engineering and AI/ML roles at product-focused teams.

TECHNICAL SKILLS

Languages: Python · JavaScript · TypeScript · Java · SQL

Frontend: React.js · Next.js · Vite · Tailwind CSS · HTML5 · CSS3 · Recharts

Backend: Node.js · Express.js · FastAPI · REST API Design · Microservices

GenAI & LLMs: LangChain · RAG · Prompt Engineering · GROQ · OpenAI API · ChromaDB · FAISS · Vector Databases · Embeddings

Databases: MongoDB · PostgreSQL · ChromaDB · SQL

DevOps & Tools: Docker · Git · GitHub · GitHub Actions · CI/CD · Postman · Uvicorn

Concepts: OOP · Data Structures & Algorithms · System Design · SDLC · Agile/Scrum · RBAC

PROJECTS

SankalpAI — Cybersecurity RAG Assistant | [GitHub](#) | [Live Demo](#)

Python · FastAPI · LangChain · ChromaDB · GROQ LLM API · Docker · GitHub Actions

- Built a domain-specific RAG assistant for cybersecurity queries, ingesting a real-world CVE dataset (updated through 2026) and CCTV device vulnerability records into ChromaDB for semantic retrieval.
- Designed a multi-step ingestion-to-response pipeline — CSV/JSONL ingestion → embedding and indexing → semantic retrieval → LLM reasoning — exposed via three FastAPI endpoints: /chat, /action/run_scan, and /action/create_ticket.
- Containerised the full service with Docker and implemented a GitHub Actions CI/CD workflow for automated build validation on every push to the repository.
- Built an HTML/JS test dashboard for end-to-end manual verification of retrieval quality and assistant response accuracy.

FinDash — AI-Enhanced Financial Intelligence Dashboard | [GitHub](#) | [Live Demo](#)

React.js · Vite · Tailwind CSS · Recharts · jsPDF · html2canvas · LocalStorage

- Engineered a custom Financial Health Score algorithm (CIBIL-inspired) that evaluates savings rate, emergency fund coverage, and spending diversity in real-time to surface actionable financial insights.
- Built a one-click PDF export pipeline using jsPDF and html2canvas, preserving live chart states and full dashboard layout — enabling professional offline reporting for users.
- Implemented Role-Based Access Control (Admin/Viewer) with permission-driven UI patterns including restricted transaction deletion, demonstrating multi-user system design principles on the frontend.
- Delivered interactive multi-dimensional charts (Area, Pie, Bar) via Recharts for month-over-month spending comparisons and category breakdowns; fully responsive with Dark Mode support.

SocialSnippet — Developer Social Platform | [GitHub](#) | [Live Demo](#)

Next.js · React.js · Node.js · Express.js · MongoDB · Tailwind CSS · JWT

- Built a full-stack social platform with end-to-end features: JWT-based authentication (login/signup), post creation and feed, comments, likes, user profiles, and search functionality.
- Implemented secure JWT authentication with role-based access control and a modular MVC backend architecture using Node.js and Express.js.

- Designed a responsive UI using Next.js and Tailwind CSS; connected to a hosted MongoDB instance and deployed as a live application.

Hydroponic Dispenser — Automated IoT Irrigation System

Arduino UNO · C++ · Soil Moisture Sensor · DHT11 · Relay Module · DC Pump

- Built a sensor-driven irrigation system that reads soil moisture and ambient temperature via DHT11, triggering a relay-controlled DC pump automatically — removing manual watering entirely.
- Implemented threshold-based control logic in C++ on Arduino UNO with real-time sensor polling and actuator response cycles.

EXPERIENCE

Full Stack Development Intern — Blackbuck Engineers (via IIDT & APSCHE)

May 2024 – Jul 2024

Remote

- Built Riddle Adventure — an interactive browser-based puzzle game using vanilla HTML, CSS, and JavaScript, deployed live on Netlify as part of a structured front-end sprint.
- Applied DOM manipulation, event-driven logic, and dynamic UI state management without any external frameworks or libraries.
- Practised Git-based version control including branching and commits across the 8-week remote development cycle.

EDUCATION

B.Tech — Computer Science Engineering (Internet of Things)

2022 – 2026

Ramachandra College of Engineering, Vatluru, Andhra Pradesh

Intermediate (MPC) — Class XI & XII

2020 – 2022

Narayana Junior College, Eluru, Andhra Pradesh

Secondary School Certificate (SSC) — Class X

2019 – 2020

Narayana EM High School, Eluru, Andhra Pradesh

ACHIEVEMENTS & COMPETITIONS

- **Smart India Hackathon (SIH) — National Finalist 2024 & 2025.** Competed among thousands of teams nationwide across both editions.
- **Cyber Security Grand Quiz — 1st Place Winner.** Demonstrated advanced problem-solving under competitive pressure.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 — AI Foundations Associate
- Diploma in SQL — Beginner to Advanced
- Introduction to Cloud Computing
